The Electronic Insect Killer utilizes the black light (ultra-violet rays) of the wave length, which is proven to be the most effective lure for light sensitive flying insects, such as flies, moths, mosquitoes, and other flying insects. These insects are electrocuted by the electrically-charge metal grids. No chemicals, no smell, no sprays, no mess, pollution free and harmless to humans and pets. It is ideal for using in houses, factories, food outlets, restaurant, canteen, office, hospitals, etc.
