

ELECTRONIC DOOR PLATE

The file describes a Model :205005 touch doorplate, which is a modern, multifunctional panel designed primarily for hotel use. Here are the key features and specifications:

- *Design and Functionality:
 - *: The doorplate features touch-sensitive buttons for various functions such as displaying the hotel logo, room number, Do Not Disturb (DND), Make Up Room (MUR), Laundry, Check-in, Wait, and Doorbell. It includes LED backlighting, making it visible in the dark and practical for guiding guests to their rooms.
- *Customization:
 - *: The LED backlight color is standard white but can be customized to other colors like red, green, orange, or blue. The glass color and size can also be customized, with a standard size of 140*225MM.
- *Material and Color:
 - *: The doorplate is made of 4MM thick tempered glass, with a standard black color option. Other colors like white or gray are available, and further customization is possible.
- *Electrical Specifications:
 - *: It operates on 220V AC, requiring only L and N cable connections. There are also models available for 12-24V DC with RS485 or MODBUS versions.
- *Additional Features:
 - *: The doorplate supports room status functions and has a status recorder that retains information even when powered off. It features a large capacitive touch area with high sensitivity and can operate in a wide range of temperatures (-10C to 60C) and humidity levels (0-95%).
- *Complete Set Options:
 - *: The doorplate can be part of a series that includes outdoor panels, indoor panels, bells, and key card switches, all with the same appearance. This product is designed to be both functional and aesthetically pleasing, with a high degree of customization to meet various hotel needs.
